

Abi-Loader

SDL's NEW automatic wheelchair loading system

The Abi-Loader is an automatic manipulator for your wheelchair that, with the flick of a switch, opens the tailgate and within 25 seconds delivers the wheelchair to the driver's door. This smart, simple and effective device speeds up entering and exiting your car. It is discreet and environmentally friendly – does not increase fuel consumption (unlike roof top loaders) and is ideally suited for use in a garage or multi story car park. Two versions are available for either folded or fixed framed wheelchairs.

The benefits of the Abi-Loader:

- Does not require large space between cars, if you can get your door open you can unload your wheelchair.
- The system will allow you to maintain your independence as the wheelchair will position itself in the correct transfer position.
- Suitable for both manual and power assisted wheelchairs like the Yamaha JW range.
- Weight lifting capacity of up to 25kg.
- Manual override.

Why not have a home demonstration to see how the Abi-Loader can help you!
